

eSpeed Market Data Via ITCH

The fastest way to get UST data from Nasdaq

eSpeed ITCH allows firms to receive a wide range of premier eSpeed U.S. Treasury Market Data, in the most efficient manner possible. The ITCH protocol is more latency-sensitive than other eSpeed data products and also includes additional fields and full depth for a more comprehensive look at fixed income.

BENEFITS AND FEATURES /

- **FULL DEPTH OF BOOK** – Seeing every order gives you greater transparency and a more accurate look into the market.
- **LOWER LATENCY** than the current Multicast or API datafeeds for eSpeed.
- **TRANSPARENCY OF ORDER FLOW** - The high level of detail in eSpeed ITCH messages help traders significantly improve their ability to perform microstructure analysis, better understand how orders are distributed throughout the market and identify new trading opportunities.
- **RETRANSMISSION AND RECOVERY MECHANISM** – Unlike the current eSpeed Multicast feed, eSpeed ITCH provides the ability to handle packet losses and reserve the current state of the market through rewind process.
- **TECHNOLOGY CONSOLIDATION** – eSpeed ITCH allows customers to reduce development and maintenance efforts for market data components if the firm has already adapted ITCH protocols for other Nasdaq OMX markets. eSpeed ITCH is the premier low-latency offering from Nasdaq.

PRICING /

For a limited time, you can trial eSpeed ITCH at no cost. Please contact your sales rep or espeeddatasales@Nasdaq.com for more information.
