

NASDAQ OMX BX TotalView-ITCH 4.0f

*Please note items within this document that have been **grayed out**, although supported technologically, will not be implemented on initial launch of the NASDAQ OMX BX (“BX”).*

1 Overview

NASDAQ OMX BX TotalView-ITCH (“BX TotalView”) is a direct data feed product offered by NASDAQ OMX BX, which features the following data elements:

- **Order level data with attribution:** The NASDAQ OMX BX TotalView-ITCH data feeds provide its full order depth using the standard ITCH format. ITCH uses a series of messages of order messages to track the life of a customer order.¹ As an added feature, the BX TotalView-ITCH 4.0f message formats will support Display fields to differentiate Flash Orders from other order types on the book. BX TotalView-ITCH carries order level data for NYSE- and Amex-listed securities as well as for NASDAQ-listed securities.
- **Trade messages:** To ensure that customers have complete information about BX order flow, BX TotalView-ITCH 4.0f supports a trade message to reflect a match of a non-displayable order in the BX system. BX TotalView-ITCH 4.0f also supports a separate trade message to reflect cross transactions.
- **Net Order Imbalance Data:** In the minutes leading up to the NASDAQ Opening and Closing Crosses, NASDAQ disseminates the indicative clearing price and net order imbalance on NASDAQ. Because the calculation includes non-displayable as well as displayable order types, the Net Order Imbalance Indicator (NOII) is the best predictor of the NASDAQ opening and closing prices available to the public.
- **Administrative messages**, such trading actions and symbol directory messages:
 - Trading action messages are used to inform market participants when a security is halted or released for trading.
 - Symbol Directory messages provide basic security data such as the market tier and Financial Status Indicator.
 - Market participant position message carries the Primary Market Maker status, Market Participant status and Market Maker mode fields used by some firms to comply with market regulations.
- **Event controls**, such as start of day, end of day and emergency market halt/resume.

2 Architecture

The BX TotalView-ITCH 4.0f feed is made up of a series of sequenced messages. Each message is variable in length based on the message type. The messages that make up the BX TotalView-ITCH 4.0f protocol are typically delivered using a higher level protocol that takes care of sequencing and delivery guarantees.

This data feed will be offered in three protocol options:

¹ BX TOTALVIEW-ITCH is an outbound market data feed only. The ITCH protocol does not support order entry. For information on BX order entry protocols, please refer to the Trading Services section of the NASDAQ OMX Trader website.

* - The availability of the functionality reflected in these specifications is subject to Securities and Exchange Commission (“SEC”) approval of the revised rules governing equity trading through BSE. The specifications contain more functionality than what is planned for initial production. Functionality that is not available will be grayed out in the specs. Any changes will be conveyed via the NASDAQ Vendor Alerts.

- [MoldUDP64](#)

3 Data Types

All integer fields are unsigned big-endian (network byte order) binary encoded numbers.

All alpha fields are left justified and padded on the right with spaces.

Prices are integer fields. When converted to a decimal format, prices are in fixed point format with 6 whole number places followed by 4 decimal digits. The maximum price in NASDAQ BX TotalView-ITCH 4.0f is 200,000.0000 (decimal, 77359400 hex).

4 Message Formats

The BX TotalView-ITCH 4.0f feed is composed of a series of messages that describe orders added to, removed from, and executed on the BX market as well as disseminate Cross and Stock Directory information.

4.1 Time Stamp – Seconds

For bandwidth efficiency reasons, BX will separate the BX TotalView-ITCH 4.0f timestamp into two pieces:

Timestamp Portion	Message Type	Notes
Seconds	Standalone message on BX TotalView-ITCH 4.0f feed	Reflects the number of seconds past midnight that the Timestamp message was generated. Note: A Timestamp – Second message will be disseminated for every second for which there is at least one payload message.
Nanoseconds	Field within individual message formats on BX TotalView-ITCH 4.0f feed	Reflects the number of nanoseconds since the most recent Timestamp-Seconds message that the payload message was generated.

For the standalone Timestamp – Seconds message, the message format will be as follows:

TIMESTAMP - SECONDS MESSAGE				
Name	Offset	Length	Value	Notes
Message Type	0	1	"T"	Seconds Message.
Second	1	4	Integer	Number of seconds since midnight.

* - The availability of the functionality reflected in these specifications is subject to Securities and Exchange Commission ("SEC") approval of the revised rules governing equity trading through BSE. The specifications contain more functionality than what is planned for initial production. Functionality that is not available will be grayed out in the specs. Any changes will be conveyed via the NASDAQ OMX News Items.

4.2 System Event Message

The system event message type is used to signal a market or data feed handler event. The format is as follows:

SYSTEM EVENT MESSAGE				
Name	Offset	Length	Value	Notes
Message Type	0	1	"S"	System Event Message.
Timestamp	1	4	Integer	Nanoseconds portion of the timestamp.
Event Code	5	1	Alpha	See System Event Codes below.

BX supports the following event codes on a daily basis on the BX TotalView-ITCH 4.0f data feed.

SYSTEM EVENT CODES – DAILY	
Code	Explanation
"O"	<i>Start of Messages.</i> Outside of time stamp messages, the start of day message is the first message sent in any trading day.
"S"	<i>Start of System hours.</i> This message indicates that BX is open and ready to start accepting orders.
"Q"	<i>Start of Market hours.</i> This message is intended to indicate that Market Hours orders are available for execution.
"M"	<i>End of Market hours.</i> This message is intended to indicate that Market Hours orders are no longer available for execution.
"E"	<i>End of System hours.</i> It indicates that BX is now closed and will not accept any new orders today. It is still possible to receive Broken Trade messages and Order Delete messages after the End of Day.
"C"	<i>End of Messages.</i> This is always the last message sent in any trading day.

In the event of an emergency market condition (EMC), BX will also support the following event codes on BX TotalView-ITCH 4.0f.

SYSTEM EVENT CODES – AS NEEDED	
Code	Explanation
"A"	<i>Emergency Market Condition – Halt:</i> This message is sent to inform BX market participants that the EMC is in effect. No trading is allowed during the EMC.
"R"	<i>Emergency Market Condition – Quote Only Period:</i> This message is sent to inform BX market participants that the EMC quotation only period is in effect.
"B"	<i>Emergency Market Condition – Resumption:</i> This message is sent to inform BX market participants that EMC is no longer in effect.

4.3 Stock Related Messages

4.3.1 Stock Directory

At the start of each trading day, BX disseminates stock directory messages for all active symbols in the system.

* - The availability of the functionality reflected in these specifications is subject to Securities and Exchange Commission ("SEC") approval of the revised rules governing equity trading through BSE. The specifications contain more functionality than what is planned for initial production. Functionality that is not available will be grayed out in the specs. Any changes will be conveyed via the NASDAQ OMX News Items.

NASDAQ OMX BX TOTALVIEW-ITCH 4.0F
INTERFACE SPECIFICATION

Market data redistributors should process this message to populate the Financial Status Indicator (required display field) and the Market Category (recommended display field) for NASDAQ-listed issues.

STOCK DIRECTORY				
Name	Offset	Length	Value	Notes
Message Type	0	1	"R"	Stock Directory Message
Timestamp - Nanoseconds	1	4	Integer	Nanoseconds portion of the timestamp.
Stock	5	6	Alpha	Denotes the security symbol for the issue in NASDAQ Single Book. Refer to Appendix NASDAQ Single Book stock symbol convention information.
Market Category	11	1	Alpha	Indicates Listing market or listing market tier for the issue "T" = CQS (NYSE, Amex or regional exchange) "Q" = NASDAQ Global Select Market SM "G" = NASDAQ Global Market SM "S" = NASDAQ Capital Market [®]
Financial Status Indicator	12	1	Alpha	For NASDAQ-listed issues, this field indicates when a firm is not in compliance with NASDAQ continued listing requirements. "D" = Deficient "E" = Delinquent "Q" = Bankrupt "S" = Suspended "G" = Deficient and Bankrupt "H" = Deficient and Delinquent "J" = Delinquent and Bankrupt "K" = Deficient, Delinquent and Bankrupt Space = Company is in compliance, if NASDAQ-listed issue For CQS issues, this field will also be space-filled. Redistributors should refer to SIAC feeds for code if needed.
Round Lot Size	13	4	Integer	Indicates the number of shares that represent a round lot for the issue
Round Lots Only	17	1	Alpha	Indicates if NASDAQ system limits order entry for issue "Y" = only round lots are accepted in this stock "N" = odd/mixed lots are allowed

* - The availability of the functionality reflected in these specifications is subject to Securities and Exchange Commission ("SEC") approval of the revised rules governing equity trading through BSE. The specifications contain more functionality than what is planned for initial production. Functionality that is not available will be grayed out in the specs. Any changes will be conveyed via the NASDAQ OMX News Items.

4.3.2 Stock Trading Action

BX uses this administrative message to indicate the current trading status of a security to the trading community.

Prior to the start of system hours, BX will send out a Trading Action spin. In the spin, BX will send out a Stock Trading Action message with the "T" (Trading Resumption) for all NASDAQ- and other exchange-listed securities that are eligible for trading at the start of the system hours. If a security is absent from the pre-opening Trading Action spin, firms should assume that the security is being treated as halted in the BX platform at the start of the system hours. Please note that securities may be halted in the BX system for regulatory or operational reasons.

After the start of system hours, BX will use the Trading Action message to relay changes in trading status for an individual security. Messages will be sent when a stock is halted, is released for quotation, or is released for trading.

STOCK TRADING ACTION				
Name	Offset	Length	Value	Notes
Message Type	0	1	"H"	Stock Trading Action Message.
Timestamp - Nanoseconds	1	4	Integer	Nanoseconds portion of the timestamp.
Stock	5	6	Alpha	Stock symbol right padded with spaces.
Trading State	11	1	Alpha	"H" = Halted "Q" = Quotation only period "T" = Trading on BX
Reserved	12	1	Alpha	Reserved.
Reason	13	4	Alpha	Trading Action reason.

* - The availability of the functionality reflected in these specifications is subject to Securities and Exchange Commission ("SEC") approval of the revised rules governing equity trading through BSE. The specifications contain more functionality than what is planned for initial production. Functionality that is not available will be grayed out in the specs. Any changes will be conveyed via the NASDAQ OMX News Items.

4.3.3 Market Participant Position

At the start of each trading day, BX disseminates a spin of market participant position messages. The message provides the Primary Market Maker status, Market Maker mode and Market Participant state for each BX market participant firm registered in an issue. Market participant firms may use these fields to comply with certain marketplace rules.

Throughout the day, BX will send out this message only if NASDAQ Operations changes the status of a market participant firm in an issue.

MARKET PARTICIPANT POSITION				
Name	Offset	Length	Value	Notes
Message Type	0	1	"L"	Market Participant Position message
Timestamp - Nanoseconds	1	4	Integer	Nanoseconds portion of the timestamp.
MPID	5	4	Alphabetic	Denotes the market participant identifier for which the position message is being generated
Stock	9	6	Alphanumeric	Denotes the security symbol for which the position is being generated
Primary Market Maker	15	1	Alphanumeric	Indicates if the market participant firm qualifies as a Primary Market Maker in accordance with BX marketplace rules "Y" = primary market maker "N" = non-primary market maker
Market Maker Mode	16	1	Alphanumeric	Indicates the quoting participant's registration status in relation to SEC Rules 101 and 104 of Regulation M "N" = normal "P" = passive "S" = syndicate "R" = pre-syndicate "L" = penalty
Market Participant State	17	1	Alphanumeric	Indicates the market participant's current registration status in the issue "A" = Active "E" = Excused/Withdrawn "W" = Withdrawn "S" = Suspended "D" = Deleted

4.4 Add Order Message

An Add Order Message indicates that a new order has been accepted by the system and was added to the displayable book. The message includes a day-unique Order Reference Number used by BX to track the order.

BX will support two variations of the Add Order message format.

* - The availability of the functionality reflected in these specifications is subject to Securities and Exchange Commission ("SEC") approval of the revised rules governing equity trading through BSE. The specifications contain more functionality than what is planned for initial production. Functionality that is not available will be grayed out in the specs. Any changes will be conveyed via the NASDAQ OMX News Items.

4.4.1 Add Order – No MPID Attribution

This message will be generated for unattributed orders accepted by the BX system.

ADD ORDER MESSAGE				
Name	Offset	Length	Value	Notes
Message Type	0	1	"A"	Add Order – No MPID Attribution Message.
Timestamp - Nanoseconds	1	4	Integer	Nanoseconds portion of the timestamp.
Order Reference Number	5	8	Integer	The unique reference number assigned to the new order.
Buy/Sell Indicator	13	1	Alpha	The type of order being added. "B" = buy order. "S" = sell order.
Shares	14	4	Integer	The total number of shares associated with the order being added to the book.
Stock	18	6	Alpha	The security symbol for which the order is being added.
Price	24	4	Integer	The display price of the new order. Refer to Data Types for field processing notes.
Display	28	1	Alpha	Indicates the Display code for the order. "Y" = Displayable order type on all BX data feeds "S" = Flash order displayable on BX TotalView-ITCH only

4.4.2 Add Order with MPID Attribution

This message will be generated for attributed orders and quotations accepted by the BX system.

ADD ORDER – MPID ATTRIBUTION MESSAGE				
Name	Offset	Length	Value	Notes
Message Type	0	1	"F"	Add Order with MPID Attribution Message.
Timestamp - Nanoseconds	1	4	Integer	Nanoseconds portion of the timestamp.
Order Reference Number	5	8	Integer	The unique reference number assigned to the new order. The order reference number is increasing, but not necessarily sequential.
Buy/Sell Indicator	13	1	Alpha	The type of order being added. "B" = buy order. "S" = sell order.
Shares	14	4	Integer	The total number of shares associated with the order being added to the book.
Stock	18	6	Alpha	The security symbol for which the order is being added.

* - The availability of the functionality reflected in these specifications is subject to Securities and Exchange Commission ("SEC") approval of the revised rules governing equity trading through BSE. The specifications contain more functionality than what is planned for initial production. Functionality that is not available will be grayed out in the specs. Any changes will be conveyed via the NASDAQ OMX News Items.

Price	24	4	Integer	The display price of the new order. Refer to Data Types for field processing notes.
Attribution	28	4	Alpha	BX market participant identifier associated with the entered order.

4.5 Modify Order Messages

Modify Order messages always include the Order Reference Number of the Add Order to which the update applies. To determine the current display shares for an order, BX TotalView-ITCH 4.0f subscribers must deduct the number of shares stated in the Modify message from the original number of shares stated in the Add Order message with the same reference number. BX may send multiple Modify Order messages for the same order reference number and the effects are cumulative. When the number of display shares for an order reaches zero, the order is dead and should be removed from the book.

4.5.1 Order Executed Message

This message is sent whenever an order on the book is executed in whole or in part. It is possible to receive several Order Executed Messages for the same order reference number if that order is executed in several parts. The multiple Order Executed Messages on the same order are cumulative.

By combining the executions from both types of Order Executed Messages and the Trade Message, it is possible to build a complete view of all non-cross executions that happen on BX. Cross execution information is available in one bulk print per symbol via the Cross Trade Message.

ORDER EXECUTED MESSAGE				
Name	Offset	Length	Value	Notes
Message Type	0	1	"E"	Order Executed Message.
Timestamp - Nanoseconds	1	4	Integer	Nanoseconds portion of the timestamp.
Order Reference Number	5	8	Integer	The order reference number associated with the executed order.
Executed Shares	13	4	Integer	The number of shares executed.
Match Number	17	8	Integer	The BX generated day-unique Match Number of this execution. The match number is also referenced in the Trade Break Message.

4.5.2 Order Executed With Price Message

This message is sent whenever an order on the book is executed in whole or in part at a price different from the initial display price. Since the execution price is different than the display price of the original Add Order, BX includes a price field within this execution message.

It is possible to receive multiple Order Executed and Order Executed With Price messages for the same order if that order is executed in several parts. The multiple Order Executed messages on the same order are cumulative.

* - The availability of the functionality reflected in these specifications is subject to Securities and Exchange Commission ("SEC") approval of the revised rules governing equity trading through BSE. The specifications contain more functionality than what is planned for initial production. Functionality that is not available will be grayed out in the specs. Any changes will be conveyed via the NASDAQ OMX News Items.

These executions may be marked as non-printable. If the execution is marked as non-printed, it means that the shares will be included into a later bulk print (e.g., in the case of cross executions). If a firm is looking to use the data in time-and-sales displays or volume calculations, BX recommends that firms ignore messages marked as non-printable to prevent double counting.

ORDER EXECUTED WITH PRICE MESSAGE				
Name	Offset	Length	Value	Notes
Message Type	0	1	"C"	Order Executed Message.
Timestamp - Nanoseconds	1	4	Integer	Nanoseconds portion of the timestamp.
Order Reference Number	5	8	Integer	The reference number of the order that was executed.
Executed Shares	13	4	Integer	The number of shares executed.
Match Number	17	8	Integer	The BX generated day-unique Match Number of this execution. The match number is also referenced in the Trade Break Message.
Printable	25	1	Alpha	Indicates if the execution should be reflected on time and sale displays and volume calculations. "N" = non-printable "Y" = printable
Execution Price	26	4	Integer	The price at which the order execution occurred. Refer to Data Types for field processing notes.

4.5.3 Order Cancel Message

This message is sent whenever an order on the book is modified as a result of a partial cancellation.

ORDER CANCEL MESSAGE				
Name	Offset	Length	Value	Notes
Message Type	0	1	"X"	Order Cancel Message.
Timestamp - Nanoseconds	1	4	Integer	Nanoseconds portion of the timestamp.
Order Reference Number	5	8	Integer	The reference number of the order being reduced.
Canceled Shares	13	4	Integer	The number of shares being removed from the display size of the order as the result of a cancellation.

4.5.4 Order Delete Message

This message is sent whenever an order on the book is being cancelled. All remaining shares are no longer accessible so the order must be removed from the book.

ORDER DELETE MESSAGE				
Name	Offset	Length	Value	Notes

* - The availability of the functionality reflected in these specifications is subject to Securities and Exchange Commission ("SEC") approval of the revised rules governing equity trading through BSE. The specifications contain more functionality than what is planned for initial production. Functionality that is not available will be grayed out in the specs. Any changes will be conveyed via the NASDAQ OMX News Items.

Message Type	0	1	"D"	Order Delete Message.
Timestamp - Nanoseconds	1	4	Integer	Nanoseconds portion of the timestamp.
Order Reference Number	5	8	Integer	The reference number of the order being canceled.

4.5.5 Order Replace Message

This message is sent whenever an order on the book has been cancel-replaced. All remaining shares from the original order are no longer accessible, and must be removed. The new order details are provided for the replacement, along with a new order reference number which will be used henceforth. Since the side, stock, and attribution (if any) cannot be changed by an Order Replace event, these fields are not included in the message. Firms should retain the side, stock symbol and MPID from the original Add Order Message.

ORDER REPLACE MESSAGE				
Name	Offset	Length	Value	Notes
Message Type	0	1	"U"	Order Replace Message
Timestamp - Nanoseconds	1	4	Integer	Nanoseconds portion of the timestamp.
Original Order Reference Number	5	8	Integer	The original reference number of the order being replaced.
New Order Reference Number	13	8	Integer	The new reference number for this order. Note that new reference numbers mean new time priority, so this order belongs below other orders at the same price in priority.
Shares	21	4	Integer	The new total displayed quantity.
Price	25	4	Integer	The new display price for the order. Refer to Data Types for field processing notes.
Display	29	1	Alpha	Indicates the Display code for the order. "Y" = Displayable order type on all BX data feeds "S" = Flash order displayable on BX TotalView-ITCH only

4.5.6 Order Display Message

This message is disseminated to alert the BX TotalView-ITCH 4.0f users that a Flash order has been added to the continuous order book for display on all BX data feeds.

ORDER REPLACE MESSAGE				
Name	Offset	Length	Value	Notes
Message Type	0	1	"V"	Order Display Message
Timestamp - Nanoseconds	1	4	Integer	Nanoseconds portion of the timestamp.

* - The availability of the functionality reflected in these specifications is subject to Securities and Exchange Commission ("SEC") approval of the revised rules governing equity trading through BSE. The specifications contain more functionality than what is planned for initial production. Functionality that is not available will be grayed out in the specs. Any changes will be conveyed via the NASDAQ OMX News Items.

Order Reference Number	5	8	Integer	The reference number of the flash order being modified to make it displayable on all BX data feeds.
------------------------	---	---	---------	---

4.6 Trade Messages

4.6.1 Trade Message (Non-Cross)

The Trade Message is designed to provide execution details for normal match events involving non-displayable order types. (Note: There is a separate message for cross events.)

Since no Add Order Message is generated when a non-displayed order is initially received, the system cannot use the Order Executed messages for all matches. Therefore this message indicates when a match occurs between non-displayable order types. A Trade Message is transmitted each time a non-displayable order is executed in whole or in part. It is possible to receive multiple Trade Messages for the same order if that order is executed in several parts. Trade Messages for the same order are cumulative.

Trade Messages should be included in BX time-and-sales displays as well as volume and other market statistics. Since Trade Messages do not affect the book, however, they may be ignored by firms just looking to build and track the BX display.

TRADE MESSAGE (NON-CROSS)				
Name	Offset	Length	Value	Notes
Message Type	0	1	"P"	Trade Message
Timestamp - Nanoseconds	1	4	Integer	Nanoseconds portion of the timestamp.
Order Reference Number	5	8	Integer	The unique reference number assigned to the order on the book being executed.
Buy/Sell Indicator	13	1	Alpha	The type of non-display order on the book being matched. "B" =buy order "S" =sell order
Shares	14	4	Integer	The number of shares being matched in this execution.
Stock	18	6	Alpha	The security symbol associated with the match execution.
Price	24	4	Integer	The match price of the order. Refer to Data Types for field processing notes.
Match Number	28	8	Integer	The BX generated session-unique Match Number for this trade. The Match Number is referenced in the Trade Break Message.

4.6.2 Cross Trade Message

Cross Trade message indicates that NASDAQ has completed its cross process for a specific security. NASDAQ sends out a Cross Trade message for all active issues in the system following the Opening, Closing and EMC cross events. Firms may use the Cross Trade message to determine when the cross for each security has been completed. (Note: For the halted securities, firms should use the Trading Action message to determine when an issue has been released for trading.)

* - The availability of the functionality reflected in these specifications is subject to Securities and Exchange Commission ("SEC") approval of the revised rules governing equity trading through BSE. The specifications contain more functionality than what is planned for initial production. Functionality that is not available will be grayed out in the specs. Any changes will be conveyed via the NASDAQ OMX News Items.

NASDAQ OMX BX TOTALVIEW-ITCH 4.0F
INTERFACE SPECIFICATION

For most issues, the Cross Trade message will indicate the bulk volume associated with the cross event. If the order interest is insufficient to conduct a cross in a particular issue, however, the Cross Trade message may show the shares as zero.

To avoid double counting of cross volume, firms should not include transactions marked as non-printable in time-and-sales displays or market statistic calculations.

CROSS TRADE MESSAGE				
Name	Offset	Length	Value	Notes
Message Type	0	1	"Q"	Cross Trade Message
Timestamp - Nanoseconds	1	4	Integer	Nanoseconds portion of the timestamp.
Shares	5	8	Integer	The number of shares matched in the NASDAQ Cross.
Stock	13	6	Alpha	The security symbol associated with the cross trade message.
Cross Price	19	4	Integer	The price at which the cross occurred. Refer to Data Types for field processing notes.
Match Number	23	8	Integer	The NASDAQ generated day-unique Match Number of this execution.
Cross Type	31	1	Alpha	The NASDAQ cross session for which the message is being generated. "O" = NASDAQ Opening Cross. "C" = NASDAQ Closing Cross. "H" = Cross for IPO and halted securities. "I" = NASDAQ Cross Network: Intraday Cross and Post-Close Cross

4.6.3 Broken Trade / Order Execution Message

The Broken Trade Message is sent whenever an execution on BX is broken. An execution may be broken if it is found to be "clearly erroneous" pursuant to the Clearly Erroneous Policy. A trade break is final; once a trade is broken, it cannot be reinstated.

Firms that use the BX TotalView-ITCH 4.0f feed to create time-and-sales displays or calculate market statistics should be prepared to process the broken trade message. If a firm is only using the BX TotalView-ITCH feed to build a book, however, it may ignore these messages as they have no impact on the current book.

BROKEN TRADE MESSAGE				
Name	Offset	Length	Value	Notes
Message Type	0	1	"B"	Broken Trade Message.
Timestamp - Nanoseconds	1	4	Integer	Nanoseconds portion of the timestamp.
Match Number	5	8	Integer	The BX Match Number of the execution that was broken. This refers to a Match Number from a previously transmitted Order Executed Message, Order Executed With Price Message,

* - The availability of the functionality reflected in these specifications is subject to Securities and Exchange Commission ("SEC") approval of the revised rules governing equity trading through BSE. The specifications contain more functionality than what is planned for initial production. Functionality that is not available will be grayed out in the specs. Any changes will be conveyed via the NASDAQ OMX News Items.

				or Trade Message.
--	--	--	--	-------------------

4.7 Net Order Imbalance Indicator (NOII) Message

NASDAQ disseminates NOII data at 5-second intervals in the minutes leading up to the NASDAQ Opening Cross and NASDAQ Closing Cross.

- o For the NASDAQ Opening Cross, NOII messages will be disseminated during the two minutes leading up to the start of market hours.
- o For the NASDAQ IPO and Halt Crosses, NOII messages will be disseminated during the quote only period. The first NOII message will be disseminated approximately five seconds after the Stock Trading Action message with the "Q" action value is disseminated.
- o For the NASDAQ Closing Cross, NOII messages will be disseminated during the ten minutes leading up to the end of market hours.

Please note that NASDAQ generates this message only for Opening and Closing Crosses-eligible issues only.

NOII MESSAGE				
Name	Offset	Length	Value	Notes
Message Type	0	1	"I"	NOII Message
Timestamp - Nanoseconds	1	4	Integer	Nanoseconds portion of the timestamp.
Paired Shares	5	8	Integer	The total number of shares that are eligible to be matched at the Current Reference Price.
Imbalance Shares	13	8	Integer	The number of shares not paired at the Current Reference Price.
Imbalance Direction	21	1	Alpha	The market side of the order imbalance. "B" = buy imbalance "S" = sell imbalance "N" = no imbalance "O" = Insufficient orders to calculate
Stock	22	6	Alpha	The security symbol for which the NOII message is being generated
Far Price	28	4	Integer	A hypothetical auction-clearing price for cross orders only. Refer to Data Types for field processing notes.
Near Price	32	4	Integer	A hypothetical auction-clearing price for cross orders as well as continuous orders. Refer to Data Types for field processing notes.
Current Reference Price	36	4	Integer	The price at which the NOII shares are being calculated. Refer to Data Types for field processing notes.
Cross Type	40	1	Alpha	The type of NASDAQ cross for which the NOII message is being generated "O" = NASDAQ Opening Cross

* - The availability of the functionality reflected in these specifications is subject to Securities and Exchange Commission ("SEC") approval of the revised rules governing equity trading through BSE. The specifications contain more functionality than what is planned for initial production. Functionality that is not available will be grayed out in the specs. Any changes will be conveyed via the NASDAQ OMX News Items.

NASDAQ OMX BX TOTALVIEW-ITCH 4.0F
INTERFACE SPECIFICATION

				<p>"C" = NASDAQ Closing Cross "H" = Cross for IPO and halted securities</p>
Price Variation Indicator	41	1	Alpha	<p>This field indicates the absolute value of the percentage of deviation of the Near Indicative Clearing Price to the nearest Current Reference Price.</p> <p>"L" = Less than 1% "1" = 1 to 1.99% "2" = 2 to 2.99% "3" = 3 to 3.99% "4" = 4 to 4.99% "5" = 5 to 5.99% "6" = 6 to 6.99% "7" = 7 to 7.99% "8" = 8 to 8.99% "9" = 9 to 9.99% "A" = 10 to 19.99% "B" = 20 to 29.99% "C" = 30% or greater Space = Cannot be calculated</p>

5 Support

- For general product support for BX data feeds, please contact NASDAQ OMX Global Data Products at +1 301 978 5307 or dataproducs@nasdaqomx.com.
- For technical support for BX data feeds, please contact NASDAQ OMX Systems Engineering at devsupport@nasdaqomx.com.

* - The availability of the functionality reflected in these specifications is subject to Securities and Exchange Commission ("SEC") approval of the revised rules governing equity trading through BSE. The specifications contain more functionality than what is planned for initial production. Functionality that is not available will be grayed out in the specs. Any changes will be conveyed via the NASDAQ OMX News Items.

Appendix A

Documentation Revision Control Log

June 18, 2009: BX TotalView-ITCH 4.0f

NASDAQ OMX made the following changes to the BX TotalView-ITCH 4.0 feed formats to accommodate Flash Orders. Please note that the following changes apply to the BX TotalView-ITCH 4.0f data feed version only:

- Added a Display field to the Add Order Anonymous message format.
- Added a Display field ("Display") to the Order Replace message format.
- Introduced a new Order Display (Type V) message format to denote when a Flash order becomes displayable on all BX data feeds
- Revised the Order Reference Number field definition for the Add Order messages to remove the following statement: "The order reference number is increasing, but not necessarily sequential."

November 13, 2008: BX TotalView-ITCH 4.0

Final release of the initial specification. This document included the following format modifications from earlier versions of the BX ITCH feed.

- Numeric fields modified to support binary integers
- Time stamp granularity changed to nanoseconds past midnight
- Added Order Replace message

* - The availability of the functionality reflected in these specifications is subject to Securities and Exchange Commission ("SEC") approval of the revised rules governing equity trading through BSE. The specifications contain more functionality than what is planned for initial production. Functionality that is not available will be grayed out in the specs. Any changes will be conveyed via the NASDAQ OMX News Items.

Appendix B

Stock Symbol Convention

For bandwidth efficiency reasons, BX supports a 6-byte symbol field on its proprietary order, quotation and trade data feed products.

For most classes of securities, this field length is sufficient to support the exchange-assigned symbol. For NYSE- and Amex-listed securities with subordinate issue types, however, NASDAQ may modify the trading symbol to fit the allotted field size on the data feeds. For the current symbol convention matrix, please refer to the [Ticker Symbol Conversion for CQS Securities page](#) on the NASDAQ OMX Trader website.

For NASDAQ-listed issues, NASDAQ currently restricts its symbol length to a maximum of 5 characters. For common stock issuances, NASDAQ will assign a symbol of 1 to 4 characters in length. For subordinate securities, NASDAQ will assign a 5 character symbol for which the last character relays information about the issue class or issue type. For the current list of fifth character symbol suffixes, please refer to [Current List of Fifth Character Symbol Suffixes for NASDAQ-listed Issues](#) on the NASDAQ OMX Trader website.

Appendix C

Trading Action – Reason Codes

For NASDAQ-listed issues, NASDAQ acts as the primary market and has the authority to institute a trading halt in an issue due to news dissemination or regulatory reasons.

For CQS issues, NASDAQ abides by any regulatory trading halts instituted by the primary or listing market as appropriate.

For both issue types, NASDAQ may also halt trading for operational reasons.

NASDAQ will send out a trading action message to inform its market participants when the trading status of an issue changes. For informational purposes, NASDAQ also attempts to provide the reason for each trading action update. For bandwidth efficiency reasons, NASDAQ uses a 4-byte code for the reason on its outbound data feeds.

REASON CODES FOR TRADING HALT ACTIONS	
Code	Value
T1	Halt News Pending
T2	Halt News Disseminated
T6	Regulatory Halt — Extraordinary Market Activity
T8	Halt ETF
T12	Trading Halted; For Information Requested by Listing Market
H4	Halt Non-Compliance
H9	Halt Filings Not Current
H10	Halt SEC Trading Suspension
