Nasdaq PSX Last Sale (PLS)

Version 2.1

1 Overview

1.1 Product Description

Nasdaq PSX Last Sale[SM] (PLS) is a direct data feed product offered by Nasdaq to support the PSX Trading and Listing Market upon launch. PLS covers the full range of issues including Nasdaq, New York Stock Exchange (NYSE), and other regional exchange-listed securities. PLS provides real-time, intra-day trade data from the PSX execution system.

Market data distributors may use the PLS data feed to update real-time stock tickers, portfolio trackers, trade alert programs, time and sale graphs, and other display systems.

For pricing and ordering information:

Refer to Market Data section of the Nasdaq Trader website.
Contact the Nasdaq Investment Intelligence at +1 301 978 5307 or +45 33 93 33 66.

2 Network Protocol Options

For direct data feed subscribers, Nasdaq PSX will offer PLS in the following protocol options:

- SoupBinTCP
- MoldUDP64

For network support and ordering information, please refer to the Nasdaq Direct Data Products Specifications Page on the Nasdaq Trader website.

3 Architecture

PLS will be made up of a series of sequenced messages. Each message is variable in length based on the message type. The messages that make up the PLS protocol are typically delivered using a higher level protocol that takes care of sequencing and delivery guarantees.

4 Data Types

All integer fields are unsigned big-endian (network byte order) binary encoded numbers.

Prices are integer fields, supplied with an associated precision. When converted to a decimal format, prices are in a fixed point format, where the precision defines the number of decimal places. For example, a field flagged as Price (4) has an implied 4 decimal places.

Timestamps reflects the PSX system time at which the outbound message was generated. PSX states time as the number of nanoseconds past midnight. The time zone is U.S. Eastern Time.

All alphanumeric fields are left-justified, ASCII fields. Padding spaces appear on the right as necessary.

5 Message Formats

5.1 System Event Message

System Event Messages is used to signal key market or data feed control events.

5.8 Administrative Messages

To help firms create a full display, PSX supports the following two administrative messages: (1) Trading Action and (2) Symbol Directory.

5.8.1 Stock Trading Action

PSX uses this administrative message to indicate the current trading status of a security to the trading community.

Prior to the start of system hours, PSX will send out a Trading Action spin. In the spin, PSX will send out a Stock Trading Action message with the "T" (Trading Resumption) for all Nasdaq- and other exchange-listed securities that are eligible for trading on the PSX market at the start of the system hours. If a security is absent from the pre-opening Trading Action spin, firms should assume that the security is being treated as halted in the PSX platform at the start of the system hours. Please note that securities may be halted in the PSX system for regulatory or operational reasons.

After the start of system hours, PSX will use the Trading Action message to relay changes in trading status for an individual security. Messages will be sent when a stock is halted / paused, is released for quotation, or is released for trading.

5.8.2 Reg SHO Short Sale Price Test Restricted Indicator

In February 2011, the Securities and Exchange Commission (SEC) implemented changes to Rule 201 of the Regulation SHO (Reg SHO). For details, please refer to SEC Release Number 34-61595. In association with the Reg SHO rule change, Nasdaq introduced the following Reg SHO Short Sale Price Test Restricted Indicator message format.

For Nasdaq-listed issues, Nasdaq supports a full pre-opening spin of Reg SHO Short Sale Price Test Restricted Indicator messages indicating the Rule 201 status for all active issues. Nasdaq also sends the Reg SHO Short Sale Price Test Restricted Indicator message in the event of an intraday status change.

For other exchange-listed issues, Nasdaq relays the Reg SHO Short Sale Price Test Restricted Indicator message when it receives an update from the primary listing exchange.

Nasdaq processes orders based on the most recent Reg SHO Restriction status value.

5.8.5 Operational Halt

The Exchange uses this message to indicate the current Operational Status of a security to the trading community. An Operational Halt means that there has been an interruption of service on the identified security impacting only the designated Market Center. These Halts differ from the “Stock Trading Action” message types since an Operational Halt is specific to the exchange for which it is declared, and does not interrupt the ability of the trading community to trade the identified instrument on any other market place.

Nasdaq uses this administrative message to indicate the current trading status of the three market centers operated by Nasdaq.

Operational Halt				
Name	***Offset***	***Length***	***Value***	***Notes***
Tracking Number	0	2	Integer	Nasdaq internal tracking number
Time Stamp	2	6	Integer	Time at which the Operational Halt message was generated. Refer to data types for field processing notes.

Appendix A – Last Sale Processing

SEC Vendor Display Rule

The Securities and Exchange Commission (SEC) has established certain display standards for market data vendors. For more information, please contact the SEC directly.

PLS carries only trade transactions executed on the PSX system. Since PLS is not a consolidated trade data feed, it should not be used to feed market data displays that are subject to the SEC Vendor Display Rule.

Issue Statistic Calculations

PLS only provides raw trade data from the PSX execution system. If needed, firms should create their own algorithms for issue- and market center-level statistics. To help in the process, PSX offers the following guidelines.

a) Last Sale and Volume Calculation

Within the market data industry, the term "last sale" has been widely used in conjunction with the SEC Vendor Display Rule. "Last Sale" is typically used to denote the most recent round or mixed lot trade transaction reported by a market center with an eligible sale condition code for the regular U.S. market session. For consolidated PSX displays, firms should use the time stamp field from the Trade Report message to determine the proper trade sequence order for last sale calculations as well as time and sales displays.

To facilitate a "Last Sale" calculation, PLS includes the sale condition modifier for the PSX execution system transactions. The Sale Condition Modifier field consists of four levels. A trade should only be applied to the high, low, last sale, and volume calculations if all four sales condition modifiers so allow.

Condition – Level 1 denotes the settlement type of the transaction. If a transaction has a special settlement code, firms should not include transaction in high, low, or last sale price calculations. If the transaction has a regular settlement type, firms should process the next levels to determine proper processing.

Code	Value	High/Low	Last Sale	Volume
@	Regular Settlement	Yes, if other levels do not overrule	Yes, if other levels do not overrule	Yes, if other levels do not overrule
C	Cash Settlement	No	No	Yes
N	Next Day Settlement	No	No	Yes
R	Seller Settlement	No	No	Yes

Sale Condition – Level 2

For Reg NMS eligible securities, this sale condition level is used to define the trade through reason code. For the PSX trading market, the allowable codes are:

Code	Value	High/Low	Last Sale	Volume
F	Intermarket Sweep Order	Yes	Yes	Yes
J	Proxy Price Settlement	Yes, if other levels do not overrule	Yes, if other levels do not overrule	Yes, if other levels do not overrule

For non-Reg NMS securities, this sale condition level is used to identify cross transactions. For the PSX listed securities, the allowable codes are:

Code	Value	High/Low	Last Sale	Volume
O	Opening Print	Yes	Yes	Yes
5	Re-Opening Print	Yes	Yes	Yes
6	Closing Print	Yes	Yes	Yes
<space>	Not applicable	See other levels	See other levels	See other levels

Sale Condition – Level 3 indicates if the transaction was reported during regular market hours with a "sold" code or during the extended trading hours session. For the ORF system, the "sold" code is used to indicate that a trade occurred during normal market hours but was reported more than 90 seconds after execution. Historically, only trades that occur during normal market hours and in proper sequence are included in the "last sale" calculation.

Code	Value	High/Low	Last Sale	Volume
T	Extended Hours Trade	No	No	Yes
U	Extended Hours Trade – Reported Late or Out of Sequence	No	No	Yes
L	Sold Last – Reported Late But In Sequence	Yes	Yes	Yes
Z	Sold – Out of Sequence	Yes	No (except if first regular market trade of day)	Yes
<space>	Not applicable	See other levels	See other levels	See other levels

Sale Condition – Level 4 indicates special trading situations.

For the PSX execution system, this sale condition level is used to denote when a trade record contains the PSX Official Opening Price or PSX Official Closing Price values.

Since PSX also reports the underlying cross execution transaction to the tape, the PSX Opening and Closing report volume should not be included in the daily volume calculation.

For the Cross Trade (X) modifiers, firms should defer to the Level 2 and Level 3 sale condition codes to determine whether to include the trade in the high, low, and last sale calculation statistics.

As outlined in the table below, PSX also observes special processing rules for the Prior Reference Price (P), Weighted Average Price (W), and Odd Lot Execution (o) codes.

Code	Value	High/Low	Last Sale	Volume
A	Acquisition	Yes	Yes	Yes
B	Bunched	Yes	Yes	Yes
D	Distribution	Yes	Yes	Yes
H	Price Variation Trade	No	No	Yes
M	PSX Official Close Price	Yes for PSX market center only or PSX system- wide displays No for PSX/ FINRA TRF only displays	Yes (for PSX market center only or PSX system- wide displays only)	No
o	Odd lot execution	No	No	Yes†
P	Prior Reference Price	Yes	No (except if first regular market trade of day)	Yes

Code	Value	High/Low	Last Sale	Volume
Q	PSX Official Opening Price	Yes for PSX market center only or PSX system- wide displays No for PSX/ FINRA TRF only displays	No	No
S	Split Trade	Yes	Yes	Yes
W	Weighted Average Price	No	No	Yes
X	Cross Trade – For PSX-listed securities only	Yes (if sent with an eligible Level 2 modifier)	Yes (if sent with an eligible Level 2 modifier)	Yes
x	Odd Lot Cross Trade	No	No	Yes
<space>	Not applicable	See other levels	See other levels	See other levels

b) Last Trade Calculation

The term "Last Trade" is more widely applied within the market data industry. Many firms use the term "last trade" to refer to the most recent trade transaction reported in sequence. In addition to the "last sale" codes, many firms include odd lots and extended trading hour executions in the "last trade" price calculations.

c) Net Change Calculation

PLS does <u>not</u> include a net change indicator field. Data feed recipient must perform their own calculation for last sale eligible and last trade eligible transactions. The formula should be as follows:

Net Change for Issue Symbol = Current Trade Price - Adjusted Previous Close Price

To obtain the Adjusted Previous Close, firms will need to apply dividends to the previous day's closing price value. Nasdaq offers several products to support Nasdaq-listed securities:

For Nasdaq-listed securities, firms may obtain dividend information via the <u>Nasdaq Daily List product page</u> on the Nasdaq Trader website

For NYSE-, NYSE American-, NYSE Arca-, BATS-, IEX-listed securities, firms should contact the listing exchange directly to inquire about corporate action data delivery options.

Dividend adjustments are typically applied to the closing price on the day prior to ex- date and reflected on the ex-date, the next business day. Cash dividends of $0.01 or greater should be subtracted from the closing price. For stock dividends, the closing price should be divided by the dividend amount.

Appendix B - Stock Symbol Convention

For Nasdaq-listed issues, Nasdaq currently restricts its symbol length to a maximum of 8 characters. For common stock issuances, Nasdaq, BX and PSX will only assign root symbols of 1 to 4 characters in length with possible fifth and or sixth character denoting a suffix. In certain instances, a dot "." delimiter may be applied to symbols after the root and between the suffix eg., XXXX.A. For subordinate securities, Nasdaq and PSX will assign a 5 character symbol for which the last character relays information about the issue class or issue type. For the current list of fifth and or six character symbol suffixes, please refer to Ticker Symbol Convention page on the Nasdaq Trader website.

For NYSE-, NYSE American- and NYSE Arca-listed securities with subordinate issue types, please refer to Ticker Symbol Convention page on the Nasdaq Trader website.

Appendix C – Trading Action Reason Codes

For Nasdaq-listed issues, Nasdaq acts as the primary market and has the authority to institute a trading halt or trading pause in an issue due to news dissemination or regulatory reasons.

For CQS issues, Nasdaq abides by any regulatory trading halts and trading pauses instituted by the primary or listing market as appropriate. For all issue types, Nasdaq and/or PSX may also halt trading for operational reasons. Nasdaq and/or PSX will send out a trading action message to inform its market participants when the trading status of an issue changes. For informational purposes, Nasdaq and PSX also attempt to provide the reason for each trading action update. For bandwidth efficiency reasons, Nasdaq and PSX use a 4-byte code for the reason on its outbound data feeds.

Appendix F – Documentation Version Control Log

July 15, 2022: PLS Version 2.1
Due to the launch of non-integer leverage factors, updated the Value/Description field of ETP Leverage Factor from section 5.8.3 page 25.

May 3, 2018: PLS Version 2.1
Nasdaq made the decision to fall back to the previous version number to avoid customer confusion related to different sequencing between the version number of the product specifications and the version number of the actual product code.

March 3, 2018: PLS Version 2.2
Released a new version of Nasdaq PSX Last Sale documentation to add a new Operational Halt message (Section 5.8.5) to indicate the current Operational Status of a security to the trading community.

September 12, 2017: PLS Version 2.1
The PLS Specification was updated to reflect the following change:

- A new Market Category code in the Symbol Directory messages for the Investors' Exchange, LLC to distinguish IEX-listed issues. New market category code is "V".
- A new Security Class field in the following messages:
  - Stock Trading Action (Type H)
  - Trade Report – Non-NextShares (Type T)
  - Trade Cancel/Error – Non-NextShares (Type X)
  - Trade Correction – Non-NextShares (Type C)

March 27, 2015: PLS Version 2.1
The PLS Specification was updated to reflect the following change:

- Increased Timestamp Length to reflect nanosecond granularity
- Addition of (Inactive) Exchange Traded Managed Funds (NextShares) changes.
- NextShares are planned to list and begin trading on Nasdaq on 10/1/2015. There are currently no plans for them to trade on PSX. Should they begin trading on PSX, these inactive (grayed out fields) will be activated to allow NextShares data to flow on PLS.

December 5, 2014: PLS Version 2.00
The PLS Specification was updated to include missing Issue Sub-Type Codes (Appendix E):

AI – Alpha Indexes ETNs
CO – Collateralized Mortgage Obligation
EU – Equity Units
